

5G Fixed Wireless Access (FWA) – Sales Battlecard

Product Overview

- Enterprise-grade wireless connectivity utilizing the 5G cellular network, delivered via a managed router.

Target Audience

- New Retail Locations & Branch Offices
- Construction Sites & Pop-up Venues
- Customers with urgent timeline requirements

Standard SLA & Delivery

- Lead Time: 48 Hours
- Requirements: Cellular coverage at the location. No physical cabling or trenching required.
- Billing: Flat Monthly Recurring Charge (MRC). Zero Non-Recurring Charges (NRC) due to self-install plug-and-play hardware.
- Deployment: Hardware is shipped overnight. Pure plug-and-play deployment.

Core Value Proposition

- Speed to Market: Don't let telecom delays push back your grand opening. We can light up a new site in days, not months.
- Zero Construction Costs: Avoid unpredictable Non-Recurring Charges (NRC) associated with digging trenches or extending fiber laterals.
- The "Interim Connectivity" Play: Use 5G FWA to instantly connect a site today, and transition it to a robust backup/failover line once primary fiber is installed.

Objection Handling

- **Objection:** "Is wireless reliable enough for a corporate office?"
 - **Response:** "Enterprise 5G offers dedicated business routing, prioritizing your corporate traffic over consumer devices, ensuring stable, high-speed performance without the wait."
- **Objection:** "What happens if cellular usage spikes?"
 - **Response:** "Business-grade 5G traffic is prioritized over consumer traffic, providing consistent performance even during peak usage periods."
- **Objection:** "Is this meant to replace fiber?"
 - **Response:** "5G FWA is ideal for rapid deployment, interim connectivity, and failover. Many customers pair it with fiber to ensure resilience and business continuity."

- **Objection:** "Is this just a temporary solution?"
 - **Response:** "Many customers start using 5G for immediate access, then keep it permanently as a backup or diversity path. It delivers value on day one and continues to protect uptime long term."
- **Objection:** "What about latency and real-time applications?"
 - **Response:** "Enterprise 5G is designed to support real-time business workloads like cloud apps, voice, and collaboration. Traffic is prioritized and managed differently than consumer cellular traffic."
- **Objection:** "Will weather or interference impact performance?"
 - **Response:** "Enterprise 5G networks are engineered for reliability across varying conditions. While no access type is immune to outages, wireless adds a physically diverse path that complements wired circuits."

Ideal Sales Motion

- Lead with urgency: openings, relocations, or construction schedules.
- Position as Day-One connectivity rather than a stopgap.
- Land as primary access, expand into fiber plus wireless redundancy.
