

Dedicated Internet Access (DIA) / Fiber Sales Battlecard

Product Overview

- Enterprise-grade, dedicated fiber-optic connectivity providing symmetrical upload and download speeds.

Target Audience

- Corporate Headquarters
- Data Centers and Cloud-Heavy Environments
- Financial Institutions & Healthcare (High Compliance)

Standard SLA & Delivery

- Lead Time:
 - On-Net: 5 to 15 Days
 - Near-Net/Off-Net: 30 to 90 Days
- Requirements: Near-Net and Off-Net delivery often requires site surveys, municipal permitting, and physical construction (trenching/lateral builds) to bring fiber into the building.
- Billing: Structured with a Monthly Recurring Charge (MRC) for the bandwidth and a Non-Recurring Charge (NRC) for the physical installation/trenching.
- Reliability: 99.999% Uptime guarantee (Five Nines) backed by financial SLAs.

Core Value Proposition

- Uncompromising Performance: Symmetrical bandwidth means your uploads are just as fast as your downloads.
- Dedicated, Not Shared: You never share a connection with neighboring businesses; you get exactly the bandwidth you pay for, 24/7.
- Future-Proof: Once the fiber is in the building, scaling from 1GB to 10GB is just a software change.

Objection Handling

- **Objection:** "It takes too long to install."
 - **Response:** "Fiber construction ensures absolute reliability for the next decade. For immediate needs, we can deploy 5G FWA in 48 hours to keep you online while the fiber is built."
- **Objection:** "Fiber is too expensive compared to broadband or wireless."
 - **Response:** "Fiber isn't priced as an access line, it's priced as critical infrastructure. You're paying for dedicated bandwidth, guaranteed performance, and financial SLAs that protect revenue-impacting applications."

- **Objection:** “We already have broadband — why do we need dedicated fiber?”
 - **Response:** “Broadband is a shared, best-effort service. Dedicated fiber guarantees bandwidth, latency, and uptime — which is essential once applications become cloud-first, real-time, or compliance-driven.”
- **Objection:** Our current provider is ‘good enough.’
 - **Response:** “Most outages don’t come from everyday usage — they come during peak demand or failure events. Dedicated fiber removes contention entirely, so performance remains consistent even when everyone else is congested.”
- **Objection:** “We’re worried about being locked in long-term.”
 - **Response:** “The contract aligns with the lifespan of the infrastructure. Once fiber is in the building, you gain long-term flexibility — upgrades happen via software, not construction.”
- **Objection:** “We don’t need 99.999% uptime.”
 - **Response:** “Many customers don’t realize they need five-nines until a single outage impacts revenue, safety, or compliance. Fiber gives you a safety margin that protects the business, even if everything else fails.”

Ideal Sales Motion

- Position as the primary, long-term connectivity foundation for mission-critical sites.
- Lead with reliability, compliance, and performance guarantees.
- Pair with 5G FWA as interim connectivity or future backup for a complete resilience story.
